SITUATION SUMMARY

Cal OES SOUTHERN REGION

Virulent Newcastle Disease (VND) in backyard poultry and avian in Los Angeles, San Bernardino, and Riverside Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (VND) in chickens in Los Angeles and San Bernardino Counties.

- On 05/16/18, CDFA detected VND in a small flock of backyard exhibition chickens in Los Angeles County, and confirmed on 05/17/18 by the United States Department of Agriculture's (USDA) Animal and Plant Health Inspection Service (APHIS).
- On 06/27/18, CDFA detected VND in backyard exhibition chickens in Riverside county and was confirmed on 06/30/18 by USDA APHIS.
- CDFA is the state lead on the incident, with support from Cal OES and in collaboration with USDA.
- USDA Incident Management Teams (IMTs) continue to rotate every two weeks to facilitate the management and support the response to the incident. The Gold IMT transition into a two week rotation beginning 07/01/18.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus. Commercial surveillance actively continue to work with commercial premises in the surveillance zones on biosecurity to help protect their poultry from VND.
- USDA IMT is working with commercial poultry premises to encourage submission of samples for VND surveillance testing, facilitate the development of Secure Food Supply Plans, and assist with the issuance of permits to move materials on and off commercial premises within established control areas.
- Backyard Surveillance (education and outreach) continues in the surveillance zones.
- CDFA and USDA have scheduled a meeting on 07/10/18 with representatives from Animal Care and Control Agencies in San Bernardino, Los Angeles, Ventura, Riverside and Orange counties to provide information on the current efforts CDFA and USDA are implementing to control and eradicate VND in San Bernardino County and surrounding areas. The goal is to strengthen partnerships with as many agencies as possible to carry out the mission of stopping the spread of VND and eradicating this devastating disease.

Declaration

- On 06/26/18 at 1840 hours, the California State Warning Center (CSWC) received a report regarding Virulent Newcastle Disease (VND) from the California Department of Food and Agriculture (CDFA). CDFA has declared an Agricultural Emergency to provide the department the authority to activate internal emergency provisions and to expedite the request for permits and waivers required to perform designated activities under an emergency basis.

Activations

- San Bernardino Operational Area (OA) EOC is activated to Level 3 (lowest level) and will continue to monitor the incident.

Deployments

- One (1) Cal OES Southern Region Senior Emergency Services Coordinator (ESC) is deployed to the ICP as an AREP (Agency Representative). Operational Period of 0700-1900 hours.
- See Fire Activity Slides.

WEATHER OF CONCERN

Weather of Concern

Northern California:

- Gusty winds combined with very low relative humidity could allow new or existing fires to spread rapidly across portions of northern California this afternoon and evening. The areas most likely to exceed critical fire weather conditions is NE California where west to southwest winds will peak around 20-25 mph with relative humidity down near or even below 10 percent.

Southern California:

- Hot weather will continue over Southern California as strong high pressure remains anchored over the West through early next week. Dangerously hot weather will continue across portions of Southern California through Monday.
- There is a possibility that a cluster of storms could bring damaging winds to southern Mohave County this evening. An even stronger cluster of storms could develop Monday night, pushing strong winds across much of the region.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High Risk for Gusty SW Afternoon Winds/Low Relative Humidity (RH) Far Eastside Today and Monday

Increasing Thunderstorm Chances Near Lake Tahoe Wednesday and in the Eastern and Northern Mtns Thursday through Sunday

A low pressure trough remains just off the west coast and strong high pressure is building over the Rockies, the 4-Corners states, and into Southern CA. The high pressure will build into the region while the trough gradually weakens today and Monday. This pattern will produce temperatures about 3-6 degrees above normal with a SW flow over the region through Monday. Areas from the Cascade-Sierra crest east will see minimum RH drop to 5-15% and SW gusts to 25-35 mph each afternoon through Monday. Inland areas west of the Cascade-Sierra crest will be dry and warm, but without critical winds, except coastal regions will remain cool, humid and breezy in the shallow marine layer. SW-NW sea breeze winds will gust to 25-35 mph through the coastal range and into the western Sacramento Valley in the typical areas during afternoons and evenings.

The high pressure ridge will gradually move northward next week, increasing temperatures and decreasing winds. Tuesday will be mostly sunny, but subtropical moisture moving in from the south will cause increasing clouds and humidity each day. Isolated thunderstorms are possible in the Sierra as far north as I-80 on Wednesday, then more activity is expected in the northern and eastern mountains Thursday through Sunday. Although storms will produce more rainfall late in the week and over the weekend, new ignitions are likely.

SOUTHERN CALIFORNIA

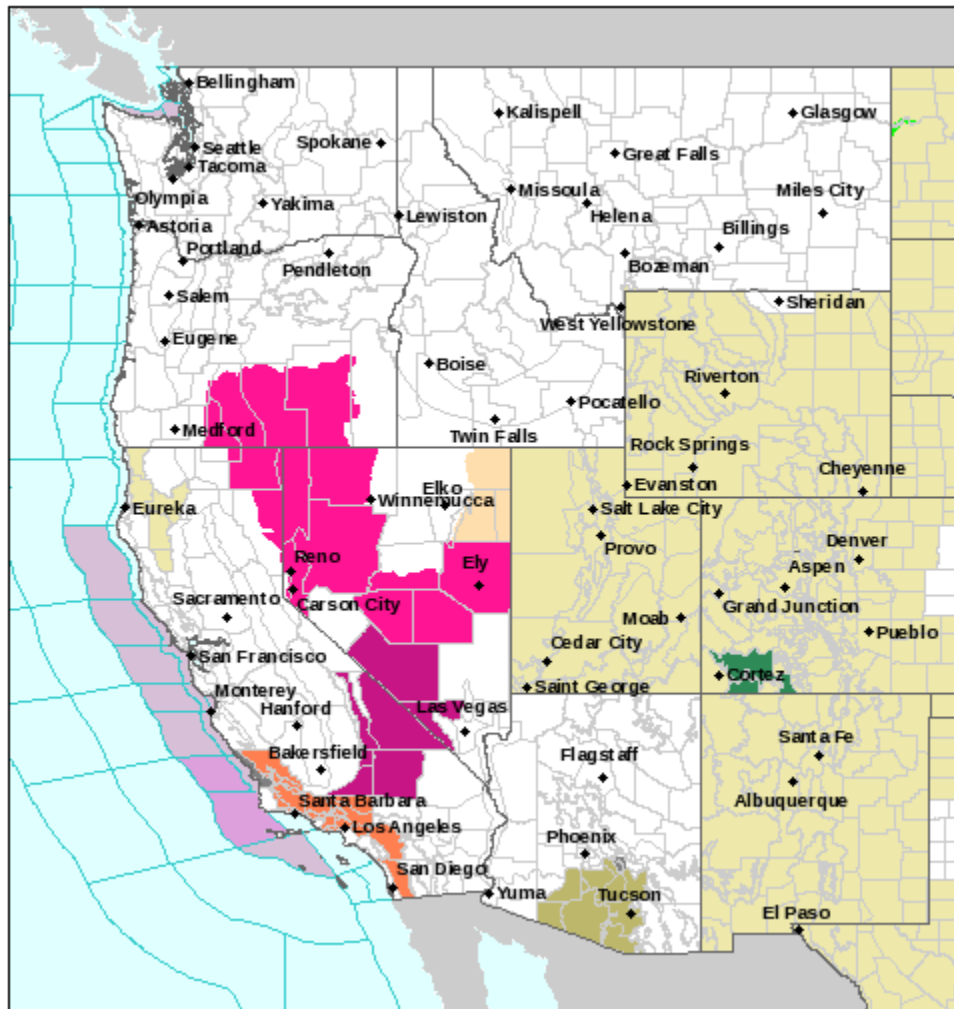

Hot and dry through Monday

Wet thunderstorms mainly over the mountains and deserts through next weekend

East to southeast flow aloft will bring isolated to scattered showers and thunderstorms mainly to the mountains and deserts during the afternoons through next weekend. At this time, it looks as though Tuesday and Wednesday will receive the most shower and thunderstorm activity as a disturbance in the flow moves across Southern California. Showers and thunderstorms will be possible all the way to the coast across Southern California when this disturbance moves overhead. Thunderstorms will continue to be wet through next weekend. Temperatures will remain 10 to 15 degrees above normal through Monday as strong high pressure remains in control of the region. Maximum temperatures will be in the mid 80s to mid 90s across the mountains and upper 90s to 110 in the valleys. Temperatures will cool Tuesday through Thursday as high pressure weakens and shifts eastward. Another strong high may form over the Great Basin bringing hot temperatures back to the region Friday through next weekend. Minimum humidity will be mainly in the teens through Monday, but it will be in the 20s across the San Bernardino and Cleveland National Forests. Minimum humidity will increase above 20% away from the Central Coast starting Tuesday. Winds will be light through next weekend, except there will be strong and erratic winds in and near any thunderstorms.
